Re: NEC LCD Technologies Fully Committed to the LCD Module Business

Dear Valued Customer,

On January 30, 2009, NEC Corporation announced its third-quarter financial results and business reform strategies, which resulted in several confusing and misleading media articles regarding our business. Today I want to reaffirm NEC LCD Technologies' commitment to the module business and its focus on the industrial market.

Although it is clear that the global LCD market, impacted by the severe economic climate, is experiencing a remarkable downturn throughout all of its global module suppliers, we want to reiterate that NEC LCD Technologies is unwavering in its long-term commitment to its business and customers.

It is also true, that as part of our normal business practices, we continually evaluate our business and customer requirements, which enables us to make the necessary adjustments to remain efficient and competitive as a company, which in turn, contributes to our continued leadership in the LCD module space.

NEC LCD Technologies has established itself as a leader in the development of new technologies and products that best meet the requirements of the industrial and high-end monitor markets. We are committed to ongoing investments in future technologies in order to provide "best-in-class" solutions.

Standing behind its strong customer-service model, NEC LCD Technologies also continues to offer long product life, stable production, a seamless transition across generations of products and full support for the industrial market, which enable you meet your current and future customers' requirements.

Our local sales teams will contact you shortly to further discuss any questions you may have. NEC LCD Technologies and our worldwide sales companies remain fully committed to our long-term business delivering high-quality TFT LCD module solutions to the industrial market and providing you with exceptional customer support.

Respectfully,

Toshihiko Ueno
President
NEC LCD Technologies, Ltd.

Robert Green
President
NEC Electronics (Europe) GmbH
